

Oussema Ben Ameer

Software Engineering Student | Backend, Databases & Distributed Systems

Tunis, Tunisia | oussema.benameur@etudiant-enit.utm.tn | +216 25 343 912 |

[linkedin.com/in/oussema-benameur](https://www.linkedin.com/in/oussema-benameur)

github.com/oussema-code

Seeking a final-year engineering internship, [4-6 months, starting from february 2027] — backend / distributed systems / full-stack engineering. *Languages:* [French – C1] | [English – B2] | Arabic (native)

EDUCATION

National Engineering School of Tunis (ENIT) — *Tunis, Tunisia* 09/2024 – Present

National Diploma in Computer Engineering (Software Engineering) — 2nd Year

Relevant coursework: Software Architecture, Algorithms & Data Structures, Databases, Distributed Systems, Networks, Operating Systems

Preparatory Institute for Engineering Studies of Sfax (IPEIS) 09/2022 – 06/2024

Scientific Preparatory Classes – PT Track (Physics & Technology)

PROJECTS

Multi-Tenant ERP SaaS Platform | *ASP.NET Core (.NET 10), React 18, TypeScript, PostgreSQL 2026 Full-Stack Project — Architecture & Backend Lead*

Engineered a cloud ERP platform following Clean Architecture, covering core business modules including Ledger, Inventory, Sales, and Payroll.

- Engineered PostgreSQL Row-Level Security (RLS) for multi-tenant data isolation on 39 tables, using a dual-role strategy and explicit EF Core transactions to guarantee correctness under connection pooling.
- Built a CQRS pipeline with MediatR (157 commands/queries) and a domain event bus (42 events, 17 handlers) enabling automated GL journal postings and complex business workflows.
- Implemented FIFO and Weighted Average inventory costing with cost layer tracking, stock reservation workflows, and backorder auto-fulfillment logic.
- Designed security layers including Firebase JWT authentication with custom claims, Role-Based Access Control (RBAC), and in-memory token storage to mitigate XSS vulnerabilities.

Collaborative Satellite Imagery & Urban Monitoring Platform | *Spring Boot, Next.js, Docker, CI/CD* 10/2025 – 05/2026

End-of-Year Engineering Project | ENIT

Built a full-stack collaborative web platform extending a legacy codebase into a production-grade microservices system.

- Architected a microservices environment with 4 independent Docker services, orchestrated seamlessly via Docker Compose.
- Redesigned the authentication layer using a dual-token JWT strategy (short-lived access token plus HTTP-only refresh cookie with SameSite policy), resolving critical legacy security vulnerabilities.
- Engineered a CI/CD pipeline via GitHub Actions to automate builds, publish Docker images to GHCR, and deploy to Azure Container Apps.
- Integrated real-time collaboration using STOMP over WebSockets for live messaging across project workspaces.

EXTRACURRICULAR ACTIVITIES

Securinets ENIT — Cybersecurity Club 03/2025 – Present

Member; CTF challenges and security workshops covering network security, ethical hacking, and vulnerability analysis.

TECHNICAL SKILLS

- **Backend:** C#, ASP.NET Core (.NET 10), Java, Spring Boot, Python, Node.js, Express.js
- **Data & Distributed Systems:** PostgreSQL (RLS), MongoDB, Redis, Entity Framework Core, Event-Driven Integration, Microservices
- **Architecture:** Clean Architecture, CQRS, Domain-Driven Design (DDD)
- **Frontend:** React 18, Next.js 14, TypeScript, JavaScript, Vite, Fluent UI, Tailwind CSS, TanStack Query
- **Auth:** Firebase Auth, JWT, RBAC
- **DevOps & Cloud:** Docker, GitHub Actions (CI/CD), Azure Container Apps, SignalR (WebSockets), Quartz.NET
- **Testing:** xUnit, FluentAssertions, JUnit, Mockito, k6 (load testing)
